Election/Restrictions

Claims 1-9, 12-14, and 23-25 directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 18-22, directed to the process of making or using an allowable product, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on August 17, 2009 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Terminal Disclaimer(s)

The terminal disclaimers filed on May 28, 2010 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent No. 7,347,199 and copending Application Nos. (a) 10/504,151 and (b) 11/408,026 have been reviewed and are accepted. The terminal disclaimers have been recorded.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the prior art does not fairly teach or suggest HFA solution formulations consisting of salmeterol, mineral acid, a liquefied HFA propellant, cosolvent in an amount of no more than 35% w/w, 0-5% w/w water, and optionally a corticosteroid and/or an anticholinergic compound, wherein the formulation has a pH value of 2.5 to 5.5. The closest prior art is Cripps et al. (WO 01/47493), which discourages the ordinary skilled artisan from including an acid in salmeterol HFA formulations, because of the possibility that the acid may catalyze the chemical degradation of salmeterol. Although Cripps teaches away from the inclusion of acid in salmeterol aerosol formulations, Applicants correctly observed and persuasively argued that Cripps does not provide any data demonstrating that acid-catalyzed salmeterol degradation does in fact occur. For this reason, the previous rejection under §112, 1st paragraph (enablement) was withdrawn. Regarding the rejoined method of treatment claims the prior art recognizes the following: (i) salmeterol administered alone is more effective than albuterol or ipratropium in the treatment of COPD (Mahler et al. "Efficacy of salmeterol xinafoate in the treatment of COPD," CHEST **1999 April**, 115(4), abstract only); (ii) salmeterol is effective for the treatment and prophylaxes of high-altitude pulmonary edema, because it stimulates alveolar fluid clearance (Sartori, C. et al. "Salmeterol For the Prevention of High-Altitude Pulmonary Edema," N. Engl. J. Med., **May 2002**, 346(21), pp 1631-1636); (iii) the clearance of alveolar fluid, such as is induced by beta-2 agonists, like salmeterol, facilitates the treatment of patients with acute lung injury and acute respiratory distress syndrome (Ware, L. B. and Matthay, M. A., "Alveolar Fluid Clearance Is Impaired in the Majority of Patients with Acute Lung Injury and the Acute Respiratory Distress Syndrome," Am

Art Unit: 1616

J. Respir. Crit. Care Med., **2001**, 163, pp 1376-1383); (iv) long-term treatment with salmeterol is superior relative the administration of albuterol in the treatment of patients with mild to moderate cystic fibrosis (i.e. a disease characterized by obstruction of the pulmonary airways as a result of inflammation or mucus hypersecretion (Hordvik, N. L. et al. "Effectiveness and tolerability of high-dose salmeterol in cystic fibrosis," Pediatric Pulmonology, **2002**, 34(4), abstract); and (v) the combination of salmeterol with inhaled corticosteroids (ICS) is effective as effective in the treatment of asthma as a much higher dosage of ICS alone (Kips, J. C. and Pauwels, R. A., "Long-acting Inhaled Beta2-Agonist Therapy in Asthma," Am. J. Crit. Car. Med., **2001**, 164, pp 923-932).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
